✓ **APK v3.43 — Moments tiles: heart → round Instagram-style (214 fixes + 1 design swap · 21 rounds)**

One-shot design change: Moments strip tiles swapped from the heart-clip silhouette to round Instagram circles. Gradient unread ring + 2px gap matches Instagram exactly. + add badge repositioned to circle's bottom-right. Close Friends green variant preserved. Chat-reaction heart lever (different feature) unchanged. Bundle 2026.0518.2249 + APK ringin-v3.43.apk.

APK v3.42 — +7 push-deep-link / OTA-battery / coin-cross-account-leak / 12 alert→toast (214 fixes · 21 rounds)

Round 21 audited deep-link push handling + lifecycle battery + cross-account cache integrity + native-dialog hygiene. P1 wins: **Lock-screen push Accept now works** (was hoisting-buggy → did nothing silently; now always opens ring modal), **OTA check skipped when backgrounded** (Capacitor app no longer hits GitHub every 5min while you're on home screen), **coin balance cross-account leak fixed** (user A's 950 was leaking to user B's CallScreen via legacy global key), **12 native alert() dialogs → toasts** (mic error + audio publish + profile validation + delete account + OTA check — all were blocking the JS thread, iOS PWA could lose AudioContext mid-call). P2: **String() coerce on 4 .split sites** (corrupted non-string full_name no longer crashes Moments/chat-menu), **prevTab reset on top-level nav** (hardware back from Search no longer lands in Anonymous Connect). Bundle 2026.0518.1701 + APK ringin-v3.42.apk.

SKIPPED

HomeScreen + Feed

BUG	STATUS	FIX SHIPPED
Edit Post broken — uses p.content but posts use p.text → modal opened empty	DONE	<i>Now reads p.text p.content ". saveEditPost also updates userPosts array + optimistic write + rollback on error + success toast</i>
Location filter chips (Dubai / Abu Dhabi / Online Only / All Locations) have no onClick	DONE	<i>Added locFilter state, wired all 4 chips, filter EXPERTS by loc field (Dubai / Abu Dhabi / Remote)</i>
Audience selector saved to DB but never enforced on feed read	DONE	<i>Client-side filter on src array: public→all, followers→only-if-follower-of-author, only_me→only-author</i>
No pull-to-refresh on feed	DONE	<i>Added pullDistH/refreshingH state + onTouchStart/Move/End on wrapper; only arms when scrolled to top; haptic on release</i>
"See all" link on Online Now strip has no onClick	DONE	<i>Added onGoToSearch prop in App.js; wired the sa span onClick to switch to Experts tab</i>

BUG	STATUS	FIX SHIPPED
Wallet coin chip hardcoded "1,240" — never read real balance	DONE	Added coinBal state, useEffect loads profiles.coins on mount, localStorage cache for instant paint
alert("Link copied") fires even when clipboard fails (8 call sites)	DONE	New copyToClipboardWithToast helper in HomeScreen + ProfileScreen: toast on real success, "Couldn't copy" on failure, legacy execCommand fallback
EXPERTS array hardcoded mock data	TODO	—
Manual "Load more" button vs auto-load	DONE	Replaced with IntersectionObserver-backed sentinel that auto-fires loadMoreFeed() when it enters viewport (300px root margin). Spinner shown while loading.
Feed cache ignored on remount	TODO	—
Carousel idx resets on every scroll	DONE	carouselIdx now persisted to localStorage 'ringin_carousel_idx' (cap 200 entries) — tab switches preserve which slide you were on.
N+1 follower notif query	TODO	—
Comments cache has no TTL	TODO	—
Online experts strip has no quick-message button	DONE	Added 💬 button next to Call on each expert in the Online Now strip; opens Messages tab with the expert's convo (same convo id pattern SearchScreen uses).

💬 Messages + Chat

BUG	STATUS	FIX SHIPPED
Coin chip hardcoded "1,240"	DONE	Added coinBal state + useEffect that loads profiles.coins, falls back to localStorage cache, locale-formatted
Block-on-send broken — used convo.id (which is `uuid1_uuid2`), never matched blocked list	DONE	otherId derivation now falls through other_user_id → otherId → receiverId → splits convId by myId. Guard only fires when otherId is a real UUID
Restrict toggle does NOTHING — writes table but no downstream enforcement	DONE	Realtime listener checks restrictedSet.has(sender_id): suppresses notification sound (chat+inbox), unread badge bump, typing indicator broadcast
Photo optimistic createObjectURL never revoked → memory leak	DONE	Added revokeLocal() helper; URL.revokeObjectURL fires after CDN URL replaces blob (success path) + all error paths + compression-failure fallback
Reactions briefly show stale data when switching chats	DONE	Added effect that resets reactionsByMsg={} on convId change; load-effect dep array now includes convId
No mute icon in inbox list for muted convos	DONE	Added 🔕 next to convo name when mutedConvos.includes(convId) — Instagram/WhatsApp convention
"Last seen" never surfaced in chat header	DONE	Added otherLastSeen state, fetched alongside avatar/name with graceful fallback if column missing; header subtitle now priority-chains typing → Online → last seen Xm ago → role

BUG	STATUS	FIX SHIPPED
Pull-to-refresh decorative — touch handlers missing	DONE	Wired onTouchStart/Move/End on the wrapper div; calls refreshConvos() if pullDist > 50; only arms when scrolled to top
Experts tab — 3 hardcoded mock convos, Call doesn't ring	TODO	—
Groups + Business tabs are coming-soon placeholders	TODO	—
No typing indicator in inbox row	TODO	—
