Live status of the bugs from [audit.pdf](#) · Updated as work completes · Refresh to see progress

✓ APK v3.42 — +7 push-deep-link / OTA-battery / coin-cross-account-leak / 12 alert→toast (214 fixes · 21 rounds)

Round 21 audited deep-link push handling + lifecycle battery + cross-account cache integrity + native-dialog hygiene. P1 wins: **Lock-screen push Accept now works** (was hoisting-buggy → did nothing silently; now always opens ring modal), **OTA check skipped when backgrounded** (Capacitor app no longer hits GitHub every 5min while you're on home screen), **coin balance cross-account leak fixed** (user A's 950 was leaking to user B's CallScreen via legacy global key), **12 native alert() dialogs → toasts** (mic error + audio publish + profile validation + delete account + OTA check — all were blocking the JS thread, iOS PWA could lose AudioContext mid-call). P2: **String() coerce on 4 .split sites** (corrupted non-string full_name no longer crashes Moments/chat-menu), **prevTab reset on top-level nav** (hardware back from Search no longer lands in Anonymous Connect). Bundle 2026.0518.1701 + APK ringin-v3.42.apk.

SKIPPED

📺 HomeScreen + Feed

BUG	STATUS	FIX SHIPPED
Edit Post broken — uses p.content but posts use p.text → modal opened empty	DONE	Now reads <code>p.text p.content "</code> . <code>saveEditPost</code> also updates <code>userPosts</code> array + optimistic write + rollback on error + success toast
Location filter chips (Dubai / Abu Dhabi / Online Only / All Locations) have no onClick	DONE	Added <code>locFilter</code> state, wired all 4 chips, filter EXPERTS by loc field (Dubai / Abu Dhabi / Remote)
Audience selector saved to DB but never enforced on feed read	DONE	Client-side filter on <code>src</code> array: <code>public→all</code> , <code>followers→only-if-follower-of-author</code> , <code>only_me→only-author</code>
No pull-to-refresh on feed	DONE	Added <code>pullDistH/refreshingH</code> state + <code>onTouchStart/Move/End</code> on wrapper; only arms when scrolled to top; haptic on release
"See all" link on Online Now strip has no onClick	DONE	Added <code>onGoToSearch</code> prop in <code>App.js</code> ; wired the <code>sa</code> span onClick to switch to Experts tab
Wallet coin chip hardcoded "1,240" — never read real balance	DONE	Added <code>coinBal</code> state, <code>useEffect</code> loads <code>profiles.coins</code> on mount, <code>localStorage</code> cache for instant paint
alert('Link copied') fires even when clipboard fails (8 call sites)	DONE	New <code>copyToClipboardWithToast</code> helper in <code>HomeScreen</code> + <code>ProfileScreen</code> : toast on real success, "Couldn't copy" on failure, legacy <code>execCommand</code> fallback
EXPERTS array hardcoded mock data	TODO	—
Manual "Load more" button vs auto-load	DONE	Replaced with <code>IntersectionObserver</code> -backed sentinel that auto-fires <code>loadMoreFeed()</code> when it enters viewport (300px root margin). Spinner shown while loading.

BUG	STATUS	FIX SHIPPED
Feed cache ignored on remount	TODO	—
Carousel idx resets on every scroll	DONE	<i>carouselIdx now persisted to localStorage 'ringin_carousel_idx' (cap 200 entries) — tab switches preserve which slide you were on.</i>
N+1 follower notif query	TODO	—
Comments cache has no TTL	TODO	—
Online experts strip has no quick-message button	DONE	<i>Added 💬 button next to Call on each expert in the Online Now strip; opens Messages tab with the expert's convo (same convo id pattern SearchScreen uses).</i>

💬 Messages + Chat

BUG	STATUS	FIX SHIPPED
Coin chip hardcoded "1,240"	DONE	<i>Added coinBal state + useEffect that loads profiles.coins, falls back to localStorage cache, locale-formatted</i>
Block-on-send broken — used convo.id (which is `uuid1-uuid2`), never matched blocked list	DONE	<i>otherId derivation now falls through other_user_id → otherId → receiverId → splits convId by myId. Guard only fires when otherId is a real UUID</i>
Restrict toggle does NOTHING — writes table but no downstream enforcement	DONE	<i>Realtime listener checks restrictedSet.has(sender_id): suppresses notification sound (chat+inbox), unread badge bump, typing indicator broadcast</i>
Photo optimistic createObjectURL never revoked → memory leak	DONE	<i>Added revokeLocal() helper; URL.revokeObjectURL fires after CDN URL replaces blob (success path) + all error paths + compression-failure fallback</i>
Reactions briefly show stale data when switching chats	DONE	<i>Added effect that resets reactionsByMsg={} on convId change; load-effect dep array now includes convId</i>
No mute icon in inbox list for muted convos	DONE	<i>Added 🔕 next to convo name when mutedConvos.includes(convId) — Instagram/WhatsApp convention</i>
"Last seen" never surfaced in chat header	DONE	<i>Added otherLastSeen state, fetched alongside avatar/name with graceful fallback if column missing; header subtitle now priority-chains typing→Online→last seen Xm ago→role</i>
Pull-to-refresh decorative — touch handlers missing	DONE	<i>Wired onTouchStart/Move/End on the wrapper div; calls refreshConvos() if pullDist > 50; only arms when scrolled to top</i>
Experts tab — 3 hardcoded mock convos, Call doesn't ring	TODO	—
Groups + Business tabs are coming-soon placeholders	TODO	—
No typing indicator in inbox row	TODO	—
