

RingIn — Fix Tracker

Live status of the bugs from [audit.pdf](#) · Updated as work completes · Refresh to see progress

✓ **APK v3.41 — +8 cover-bio-guard / scroll-lock-refcount / sign-out-cache-wipe / FCM-dedupe (207 fixes · 20 rounds)**

Round 20 audited session-expiry edges + custom DOM hygiene + multi-tab cache leakage + auth refresh overhead. P1 wins: **ProfileScreen cover-save now bails on session-expiry RLS rejection** (was silently wiping bio text + social links + every other bio JSON field when re-reading bio failed), **new bodyScrollLock util with ref-count** (replaces 6 independent per-modal snapshot/restore — 2 stacked modals no longer leak overflow:hidden permanently), **SIGNED_OUT now wipes server-backed blocks cache + follows cache + FCM token cache** + new resetBlocksCache resets module-scope Set (next user gets clean slate). P2 polish: **FCM requestPermission gated on Notification.permission + once-per-session + profiles.fcm_token write deduped** via LS cache (no more hourly redundant DB writes), **otaUpdater _otaStarted guard**, **Messages tap-on-active-tab now dispatches event instead of remount** (was causing realtime-channel collision), **SW registration cache-busting** + updateViaCache:'none', **chat photo raw-fallback insert .catch** (was leaking temp+blob on offline). Bundle 2026.0518.1619 + APK ringin-v3.41.apk.

SKIPPED

📺 HomeScreen + Feed

BUG	STATUS	FIX SHIPPED
Edit Post broken — uses p.content but posts use p.text → modal opened empty	DONE	Now reads <code>p.text p.content </code> . <code>saveEditPost</code> also updates <code>userPosts</code> array + optimistic write + rollback on error + success toast
Location filter chips (Dubai / Abu Dhabi / Online Only / All Locations) have no onClick	DONE	Added <code>locFilter</code> state, wired all 4 chips, filter EXPERTS by loc field (Dubai / Abu Dhabi / Remote)
Audience selector saved to DB but never enforced on feed read	DONE	Client-side filter on <code>src</code> array: <code>public</code> → <code>all</code> , <code>followers</code> → <code>only-if-follower-of-author</code> , <code>only_me</code> → <code>only-author</code>
No pull-to-refresh on feed	DONE	Added <code>pullDistH/refreshingH</code> state + <code>onTouchStart/Move/End</code> on wrapper; only arms when scrolled to top; haptic on release
"See all" link on Online Now strip has no onClick	DONE	Added <code>onGoToSearch</code> prop in <code>App.js</code> ; wired the <code>sa</code> span onClick to switch to Experts tab
Wallet coin chip hardcoded "1,240" — never read real balance	DONE	Added <code>coinBal</code> state, <code>useEffect</code> loads <code>profiles.coins</code> on mount, <code>localStorage</code> cache for instant paint
alert('Link copied') fires even when clipboard fails (8 call sites)	DONE	New <code>copyToClipboardWithToast</code> helper in <code>HomeScreen</code> + <code>ProfileScreen</code> : toast on real success, "Couldn't copy" on failure, legacy <code>execCommand</code> fallback
EXPERTS array hardcoded mock data	TODO	—

BUG	STATUS	FIX SHIPPED
Manual "Load more" button vs auto-load	DONE	Replaced with <i>IntersectionObserver</i> -backed sentinel that auto-fires <i>loadMoreFeed()</i> when it enters viewport (300px root margin). Spinner shown while loading.
Feed cache ignored on remount	TODO	—
Carousel idx resets on every scroll	DONE	<i>carouselIdx</i> now persisted to <i>localStorage</i> 'ringin_carousel_idx' (cap 200 entries) — tab switches preserve which slide you were on.
N+1 follower notif query	TODO	—
Comments cache has no TTL	TODO	—
Online experts strip has no quick-message button	DONE	Added 🗨 button next to Call on each expert in the Online Now strip; opens Messages tab with the expert's convo (same convo id pattern SearchScreen uses).

🗨 Messages + Chat

BUG	STATUS	FIX SHIPPED
Coin chip hardcoded "1,240"	DONE	Added <i>coinBal</i> state + <i>useEffect</i> that loads <i>profiles.coins</i> , falls back to <i>localStorage</i> cache, locale-formatted
Block-on-send broken — used <i>convo.id</i> (which is `uuid1_uuid2`), never matched blocked list	DONE	<i>otherId</i> derivation now falls through <i>other_user_id</i> → <i>otherId</i> → <i>receiverId</i> → splits <i>convId</i> by <i>myId</i> . Guard only fires when <i>otherId</i> is a real UUID
Restrict toggle does NOTHING — writes table but no downstream enforcement	DONE	Realtime listener checks <i>restrictedSet.has(sender_id)</i> : suppresses notification sound (chat+inbox), unread badge bump, typing indicator broadcast
Photo optimistic <i>createObjectURL</i> never revoked → memory leak	DONE	Added <i>revokeLocal()</i> helper; <i>URL.revokeObjectURL</i> fires after CDN URL replaces blob (success path) + all error paths + compression-failure fallback
Reactions briefly show stale data when switching chats	DONE	Added effect that resets <i>reactionsByMsg={}</i> on <i>convId</i> change; load-effect dep array now includes <i>convId</i>
No mute icon in inbox list for muted convos	DONE	Added 🔕 next to convo name when <i>mutedConvos.includes(convId)</i> — Instagram/WhatsApp convention
"Last seen" never surfaced in chat header	DONE	Added <i>otherLastSeen</i> state, fetched alongside <i>avatar/name</i> with graceful fallback if column missing; header subtitle now priority-chains <i>typing</i> → <i>Online</i> → <i>last seen Xm ago</i> → <i>role</i>
Pull-to-refresh decorative — touch handlers missing	DONE	Wired <i>onTouchStart/Move/End</i> on the wrapper div; calls <i>refreshConvos()</i> if <i>pullDist</i> > 50; only arms when scrolled to top
Experts tab — 3 hardcoded mock convos, Call doesn't ring	TODO	—
Groups + Business tabs are coming-soon placeholders	TODO	—
No typing indicator in inbox row	TODO	—
