

RingIn — Comprehensive App Audit

Generated 2026-05-17 · refreshes as agents complete

 IN PROGRESS

Multiple agents auditing the app right now

This document will be populated with findings over the next 30–60 minutes. Refresh the link periodically to see results.

What's being checked (in parallel, supervised)

A supervisor agent reviews every report to make sure no screen or feature is missed.

1 HomeScreen

Feed scrolling, post composer, comments, likes, moments strip, hashtag filter, online experts strip, post detail viewer, share/save buttons.

2 MessagesScreen

Inbox list, chat box, message reactions, typing indicators, photo attachment, unsend, mute conversation, blocked users, new Friends / Experts / Groups / Business tabs.

3 CallScreen + voice/video

Agora integration, ringtone, accept / decline buttons, in-call controls (mute, speaker, end), call timer, missed call notifications, lock-screen push.

4 SearchScreen

Experts list, search FTS (people + posts), follow / call buttons, trending hashtags, expert profile view, message-expert button.

5 ProfileScreen + Settings

Every toggle (sound, haptics, privacy, notifications), blocked users list, muted words, delete account flow, expert application, auto-update toggle, version display, sign out, footer.

6 Security

RLS policies on every Supabase table, exposed secrets in repo (.env, service-role keys), API endpoint authentication, OTA bundle integrity, CORS settings.

7 Dummy buttons + non-saving + non-caching

Every clickable element traced to its actual handler. localStorage and Supabase persistence verified per feature. Caches that should expire but don't.

8 Social-media comparison

Instagram, Facebook, LinkedIn, Twitter, WhatsApp standard patterns vs what RingIn implements. Gaps and recommendations.
